DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 34-36 and 47-50 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Kottler et al., U.S. patent No. 6,504,898 B1.

Kottler et al., clearly teach a method and apparatus for optimizing the irradiation of products wherein maximum and minimum dose rates are determined for the given geometry, such as thickness, of the product to be treated and the intensity of the radiation applied is modified such that the entire product receives the optimal amount of radiation consistently. The modification of the radiation is achieved by means adjustably modulating the shape of the radiation generated. See column 1, lines 20-25, column 3, lines 10-15, column 4, lines 1-15 and 40-50, column 7, lines 25-35, column 8, lines 14-47, column 9, lines 25-60, and column 12, lines 60-68.

Response to Arguments

Applicant's arguments filed 2/3/2005 have been fully considered but they are not persuasive. Applicant argues that Kottler fails to teach or suggest reducing the intensity of the radiation, however, the Examiner would disagree. Kottler teaches dynamic

Page 3

Art Unit: 1744

modulation of the intensity of the radiation applied to a product in order to maintain a desired, uniform dose rate for the entire product, that dose rate having pre-determined maximum and minimum parameters. The modulation taught in Kotlter inherently requires reducing the intensity if dose rates are detected that exceed the desired dose rate. See column 7, lines 20-45 for the description of the maximum, minimum and desired uniform dose rates, and column 10, lines 41-44, column 11, line 13 through column 12, line 8, column 13, lines 35-40, column 15, lines 9-12 and column 16, lines 6-15, describing the modulation of the intensity or power of the radiation beam.

The statutory type double patenting rejection has been overcome by cancellation of claims 1-33.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Krisanne Jastrzab whose telephone number is 571-272-1279. The examiner can normally be reached on Mon.-Wed. 6:30am-4:00pm and alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Kim can be reached on 571-272-1142. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
